

COPPER WIRE

After having dug to a depth of 10 feet last year, New York scientist found traces of copper wire dating back 100 years, and came to the conclusion that their ancestors already had a telephone network more than 100 years ago.

Not to be outdone by New Yorkers, in the weeks that followed, a California archaeologist dug to a depth of 20 feet and shortly after, a story in the LA Times read: California archaeologist finding of 200 year old copper wire have concluded that their ancestors already had an advanced high tech communications network a hundred years earlier than New York.

One week later, a local newspaper in Kansas reported the following: After digging as deep as 30 feet in his pasture near Pittsburg, KS, Bubba, a self taught archaeologist, reported that he found absolutely nothing. Bubba has therefore concluded that 300 years ago Kansas had already gone wireless!
